

Project Description

Project Vision

To conduct a comprehensive quality control assessment of the demoblaze.com e-commerce platform, ensuring its functional integrity, reliability, and adherence to user experience standards.

Executive Summary

demoblaze.com is a web-based retail application specializing in electronic goods, including phones, laptops, and monitors. This testing project aims to systematically validate the end-to-end user journey, from user registration and product browsing to cart management and order placement. The primary objective is to identify and document defects to ensure the application functions as intended before a production release.
